Metrics of Success

[qualitative]

[quantitative]

[qualitative]

This release should take into account the feedback we've received. We'll have blogged extensible about the process of moving from Revision-A to Revision-B.

Metrics of Success (from Beltzner) **1.** People spend less time hunting for a tab that * Time to find a particular tab they want to switch between. [quantitative] * Average time spent hunting **2.** Users can better manage the sites that they * Raw switch time (back and forth) want to read later but don't want to bookmark. * Psychometric time? * User acceptance button **3.** People can still move quickly between a small

Finish the specification for minimum thing for

required for these things **6.** Continues to work well for small sets of tabs.

shipping.!

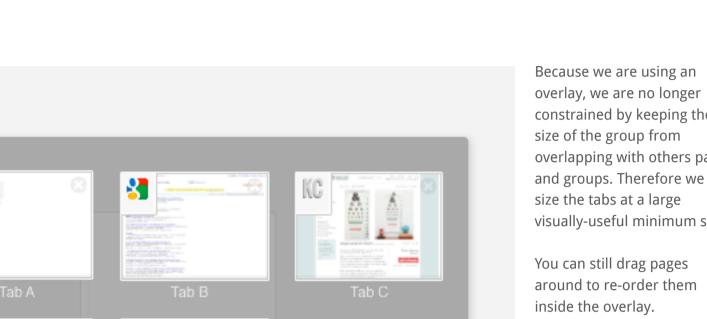

Last week of May Release Revision-B version of TabCandy. This release is feature complete, meaning that

Last week of June Release Revision-C version of TabCandy. This release is feature complete, and interaction features are frozen after this time. complete. We are now happy with all of the features and how they work.

of Firefox.

By this point, we hope to have tens of thousand (if not more) users. I'd like to figure out how to integrate this with the beta versions

Last week of July Release Revision-D. This release focuses on polish—both performance and fiddly edgecases. By this release, we hope to have something we are feeling confident about trying to get onto trunk.

Because we are using an overlay, we are no longer constrained by keeping the size of the group from overlapping with others pages and groups. Therefore we can size the tabs at a large visually-useful minimum size.

You can drag a page out of an overlay to put it into another group. When it crosses the boundary of the overlay, the overlay shrinks away and you can place the page anywhere you like.
